

# Management Software

## PROFESSIONAL IT-CLASS MANAGEMENT TOOLS

The Dedicated Micros management software brings professional IT-class management tools to the security industry. The software suites enable seamless viewing of DVRs and cameras on the network, bringing you images from any moment in time, anywhere in the world.

Dedicated Micros offers the free, downloadable, NetVu ObserVer software in support of its NetVu Connected family of DVRs. The ObserVer application allows the user to view and manipulate video from a single facility or from multi-site installations at any time or place over the Internet. ObserVer's site tree software allows you to quickly access a live view of any camera on the network. A straight forward drag and drop GUI, together with saved screen views provide the user with an easy-to-use viewing solution.

In addition, NetVu ObserVer's built-in replay server software allows the viewing of archived video from a hard drive, server or DVD / CD. Features include AVI format support to play on most common video files such as Windows Media Player or Google Earth integration for location tracking. It also includes LCD wide screen multi-camera viewing layout with the ability to create PDF formatted reports.

## Centralized Management Tool

From one platform, the Centralized Management Tool (CMT) software suite lets the user to administer, configure, sync and update each DVR individually or by batch. Whether you are responsible for one large facility or multiple sites, you will find that CMT is the essential, indispensable management tool for security and IT professionals.
